

WILLIAMS PROVIDES HIGH QUALITY SYSTEMS

VERTICAL STACK FAN COILS

Doug Murphy Senior Mechanical Engineer with WSP, an engineering firm in Boston, says that “Williams provides high quality systems”. Doug chose Williams vertical fan units for the Four Seasons Hotel and Condominium project in Boston because Four Seasons is very concerned about “sound, temperature, and client comfort”.

Doug says that “the sound data is better performing” for Williams vertical fan coil units. Doug also chose Williams vertical fan coils because of “the efficiency of the system”.

Doug feels that “Williams has been consistent in the industry with their support.” He says that “in the end the client is going to get an excellent [Williams] product that is going to last for the life of the building”.

All this saves him time and he “will not get any call backs” either during construction or after the building is completed.
